Subject Good Challenge!

Mark – I knew I saw temperature limits and fire in the same paragraph however, you appear to be correct in the rule does not provide language that would relax the temperature in the event of a fire I'm checking a database of landfill reg discussions to see if this question has come up among the Regions

(c) Operate each interior wellhead in the collection system with a landfill gas temperature less than 55 °C and with either a nitrogen level less than 20 percent or an oxygen level less than 5 percent. The owner or operator may establish a higher operating temperature, nitrogen, or oxygen value at a particular well. A higher operating value demonstration shall show supporting data that the elevated parameter does not cause fires or significantly inhibit anaerobic decomposition by killing methanogens.
